

ETL Classified FS System™

Last month we proudly began producing FS Systems with the ETL Classified Mark. Now, the #1 solar mounting system for large-scale commercial and utility projects complies with the standard for safety under UL-1703, CAN/ULC-ORD-C1703, and UL-Subject-2703.

Quality Assurance

Intertek®, the issuing organization of the ETL Classified Mark, engaged in extensive system testing in order to qualify the FS System in its entirety, including all components. The ETL Mark is assurance that the FS System is compliant with safety standards, having been tested and certified by a third-party organization.

Save Time

When used in combination with our ETL Listed Rapid2+ Grounding Middle Clamp, be assured the entire FS System is a completely bonded system from module down to the post. Save time and make the system inspection easier.

The FS System Benefits...

- Start-to-finish design and engineering guidance
- Complete drawing package for installation and permitting ease
- High level of pre-assembled parts for quick installation and cost reduction
- When used with GAYK pile driving ram, large solar fields are assembled with ease
