

Park@Sol™ Modular Carports for Power Generation

Schletter's Park@Sol carport system is ideal for any sized parking structure from small residential single car units to large commercial parking areas. Designed to use a unique concrete foundation that minimizes the foundation size in relation to the shading surface area, Park@Sol allows for ample module installation. The result is added solar power generation while creating shade from summer sun!

Key Benefits

- Engineered to be IBC compliant
- Residential and commercial parking structures available
- High level of pre-assembled components
- Made in the USA, ARRA compliant
- Can incorporate P-Charge™, electric power charging stations

Support Material

- Park@Sol Product Brochures
- Systems Overview, Ground Mount and Carport
